Osaka Steel Receives SGBP Certification for Angles and Channels

Osaka Steel Co., Ltd. is pleased to announce that it has received certification under the Singapore Green Building Product (SGBP) scheme, an environmental performance certification program for building materials operated by the Singapore Green Building Council (SGBC), for two product categories: angles and channels. *1

The certified products have achieved “**4 Ticks**,” the highest rating under the SGBP certification system.

SGBP is a third-party certification program that assesses and certifies the environmental performance of building materials. Products are evaluated on a four-tier scale ranging from 1 Tick to 4 Ticks, with 4 Ticks awarded to products that demonstrate outstanding environmental performance and a strong contribution to sustainability through reduced environmental impact.

Through this certification, Osaka Steel’s products are independently recognized as meeting high environmental standards and supporting the growing demand for green procurement and decarbonization within the construction industry.

Osaka Steel will continue to contribute to the realization of a decarbonized and sustainable society by providing environmentally responsible products and promoting initiatives that reduce environmental impacts through the value chain.

*1 The scope of certification is limited to the dimensions/specifications listed in the SGBP Certificate.
